

REACH HIGH STANDARDS WITH RIDBA

The rural and industrial buildings industry strives for the highest standards in its projects.

CE marking is a pillar of compliance to ensuring products are legal and safe.

Accordingly, RIDBA has outlined the key reasons why CE marking is valued by its members, and why clients and suppliers can have confidence in choosing a RIDBA member.

Levelling the Playing Field

RIDBA wants to ensure all companies in the sector can compete on equal footing. Large or small, steel frame manufacturers must meet the same standard – BS EN 1090-1. Having the CE Mark also ensures unscrupulous traders cannot undercut on price nor sacrifice safety.

✔ Client Peace of Mind

Clients, Customers and Specifiers can be confident that RIDBA frame manufacturers have all achieved the CE mark, meet BS EN 1090 Parts 1 and 2, and their buildings are designed to the latest standards.

✔ A Fully CE Compliant Industry

RIDBA is raising the bar across the industry, supporting provisional members to achieve the CE Mark. RIDBA is also supporting members through trade across the EU and the introduction of the UKCA mark.

✔ Consistent Enforcement

Trading Standards are now enforcing CE Marking across the country. RIDBA's Primary Authority Agreement with Trading Standards ensures that enforcement of the CE Mark is consistent across the UK, and provides a simple way for companies to report non-compliance.
